The Hallie Hill Howler

LAPS FOR LOVE 2021!

“They got Soggy for the Doggies!”

“Thanks to you, our 4th Annual Laps for Love was a huge success! In the early morning hours of July 31st, we had 7 volunteers swimming their hearts out for the dogs and cats here at the sanctuary. 100 laps in one hour or 200 in 2 hours is an incredible feat of strength and endurance. The swimmers each demonstrated their passion and commitment to helping animals in need and their supporters made it all worthwhile. Collectively, the swimmers raised over \$20,000 which surpassed our original goal by more than \$5,000! We are incredibly grateful for your continued support of Hallie Hill Animal Sanctuary and our mission to provide a compassionate safe-haven with quality food and medical care for dogs and cats; a temporary home for those able to be adopted, and a forever home for those in need.”

Volunteer Spotlight

VOLUNTEER

Sarah Williams

Sarah is originally from CT, having worked and lived in NYC for most of her career. When she was relocated to the Raleigh area in 2010, she began volunteering at Saving Grace NC, a large dog rescue which has found homes for over 22,000 dogs since 2004!

Sarah branched out and began to work with breed specific rescue groups, hoping to work to open people's eyes to the idea that every kind of dog you might want can be found in rescue. She fostered dogs and served as the Medical Manager for Carolina Basset Hound Rescue for 5 years, and then moved on to The English Springer Spaniel Rescue.

Sarah has 5 dogs from all stages of her life. Her 12-year-old cockapoo, Juno, came with her from CT (Sarah calls Juno her "before I knew there was a crisis" dog as there really isn't a natural population of stray dogs in New England). Sara's 11-year-old beagle mix, Woody, was her first foster from Saving Grace. She has a 16-year-old chihuahua mix from Best Friends Animal Society, and a 3-year-old basset mix from a litter born to one of her fosters for Carolina Basset Hound Rescue, and last but certainly not least, a 1.5 year old spaniel mix, her covid "foster-fail" from the English Springer Spaniel Rescue!

Since Sarah moved to Charleston a few years ago she has been looking for a volunteer opportunity, but they were all placed on hold due to the pandemic. She's thrilled to finally find a volunteer home with Hallie Hill!

Attention Cat Lovers!

We are looking for a loving volunteer to do the cat care regularly on Mondays!
Contact Jennifer if you are interested!

ATTENTION VOLUNTEERS!

Microchipping and Lost Pet Prevention

No matter how careful we are with our pets, they can still get lost. For instance, they can sneak out a door or open window or scoot under a fence in the backyard. While there is no sure way to prevent your pet from getting lost, you can help make sure they are returned home with a microchip.

If you're not sure if your pet was microchipped by a previous owner, you can ask your [veterinarian](#) to check for one at your next visit. You should also contact the microchip registration service and update it with your information. What is a microchip?

What is a microchip?

A microchip is a small device implanted under your pet's skin. It emits a low radio frequency that can be read by a scanner to show a unique identification code. Most veterinarians and shelters have a universal scanner, which can read any kind of microchip. The code can be called into the registration service associated with the microchip and used to look up the pet parent's contact information. The service can then call the pet parent to let them know the pet has been recovered and help arrange for a

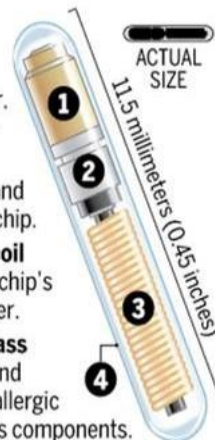

Read the rest of the article [HERE](#) for lots of great need-to-know information!

HOW A PET MICROCHIP WORKS

Veterinarians can implant these tiny devices in all kinds of pets – including cats, dogs, birds and reptiles. Each chip carries a unique number that is linked in an online database to the name and contact information of the pet's owner.

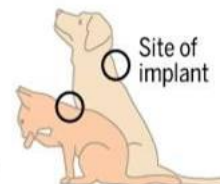

KEY PARTS

- 1. Microchip** holds the unique ID number.
- 2. Tuning capacitor** receives power from an external scanner and sends it to the microchip.
- 3. Copper antenna coil** then transmits microchip's information to scanner.
- 4. Biocompatible glass capsule** – nontoxic and designed to prevent allergic reactions – surrounds components.

IMPLANTATION

A needle is used to inject the chip between a dog or cat's shoulder blades. The procedure does not require anesthesia.

REGISTRATION

The pet and its owner are enrolled in a database, either by mail or on the Internet. But owners must keep their contact information up to date for the system to work properly.

DETECTION

The chip has no battery. It is energized by the radio waves of hand-held scanners used by animal shelters and veterinarians.

Do you know if your dog or cat is chipped? Come on out to Hallie Hill (5604 New Road in Hollywood) on Sunday, August 15th, between 8AM and 4PM to have your pet scanned for an existing chip! Learn the ID number and how to be sure the information is up to date in the registry!

DOES YOUR PET NEED A CHIP?

On Sunday, 8/15, from 8AM to 4PM Hallie Hill will be chipping dogs and cats for the nominal fee of \$15! Keep them safe! Get them chipped!

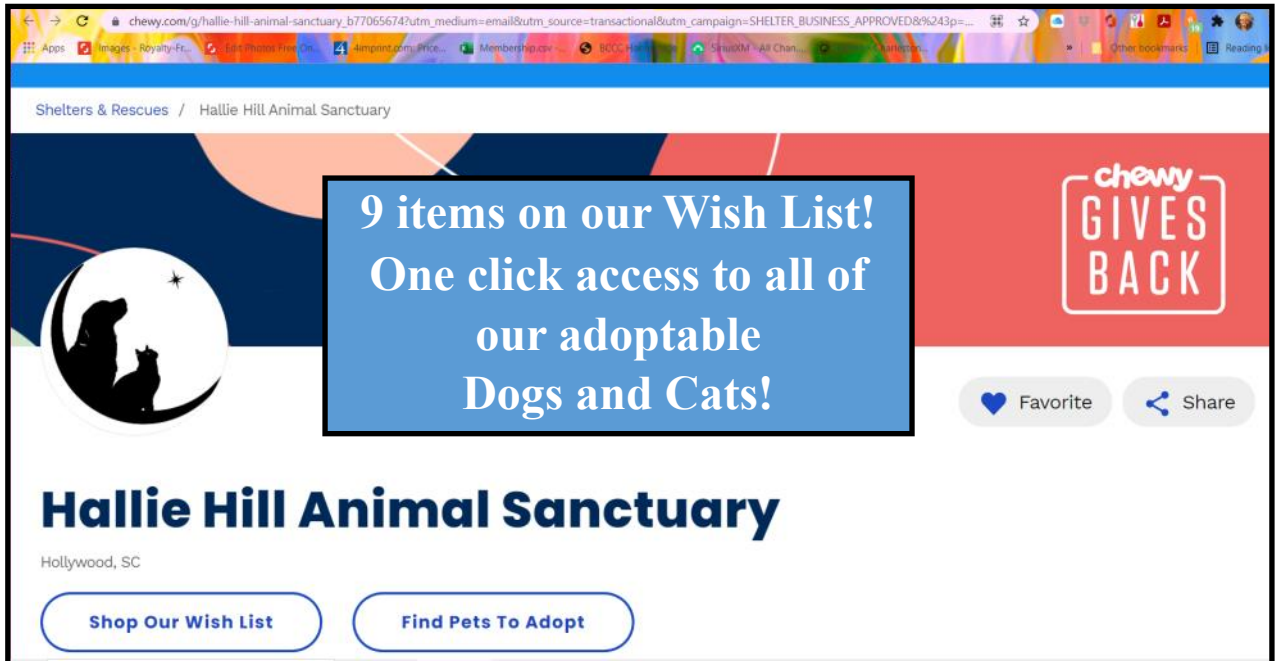

Yappy Hour

How To Keep Your Dog Safe From Coyotes!

Pet parents beware: Coyote attacks can – and do – happen.

Okay, I know what you're thinking: "Coyotes?" "There are no coyotes near me!" But, gone are the days of coyotes only roaming the prairies and forests of the west. Today, coyotes call every state in the United States (*except Hawaii*) home. They can be found everywhere from coast to coast, in rural, suburban, and urban settings. So, you could meet up with one on a walk, hike, at the park, or even in your own backyard!

Why? Humans! Human land expansion and development have taken over so much of the wide-open natural landscape which has ultimately forced coyotes (*and other wildlife*) to move on. Additionally, human hunting habits have thinned out populations of the coyotes' natural predators, like the wolf.

About Coyotes

Get this: Coyotes are a member of the dog family. So, as you may imagine, they're very attracted to our pet dogs. Likewise, our dogs are attracted to them. They can even mate! But, it's important we keep our pups far away to avoid attacks. Coyotes are skilled hunters who are resourceful and masters at adapting. They can stalk and subsequently snatch their prey in a flash. They've even been known to grab dogs right from their leash on a walk. They're not afraid of your dog, but *they are* cautious of humans. So, keep Fido close.

Some quick facts about coyotes:

Coyotes look similar to a German Shepherd, but they have narrow snouts, long triangular ears, yellow eyes, long course grayish-brown or yellowish-brown fur on their upper body with whitish fur underneath, and a long bushy pointy tail (usually with a black tip).

If you're ever not sure who is running – dog or coyote – check out his tail. Dogs run with their tails up and coyotes run with theirs down.

Their height reaches 24" to the shoulder, and they weigh in at 20-50 pounds. Eastern coyotes are known to be larger.

Their formal name is *Canis latrans*.

They are omnivores. Although coyotes prefer to eat smaller animals (*like rats, raccoons, rabbits, and squirrels*), when those choices aren't available, they will eat fruits, seeds, and plants ... or whatever they can scavenge.

Lifespan in the wild is 10-14 years, but in captivity can be up to 20 years.

August's Adorable Adoptables!

Go to halliehill.com and fill out an application to come out to HHAS to meet these wonderful animals!

Nana

Look at these big brown eyes! Nana is a 7 year old St. Bernard mix and is a big girl who thinks she is a lap dog! She loves her people and other dogs alike! We KNOW there are some 'big dog' lovers out there who would be the perfect family for our sweet girl!

Linus

Linus is almost 2 years young and he is deaf! A volunteer said, "Deaf dogs hear with their heart" and Linus' heart can hear a pin drop! He is an exuberant boy who is responding well to training and needs some more! He adores playing fetch! He would make a wonderful canine member of an active family!

Wonton

Wonton is just 3 months old and is ready to do his growing up as a special part of your family! Kittens bring such laughter and joy to your home, and there is nothing like a 'huggle' (hug and a snuggle) from a warm purring kitten!

Chevy

Yup, it's kitten season! Meet Chevy, a 5 month old male who has a special addition—he is polydactyl! He is also a beautiful ginger, and they are known to be sweet, gentle companions. He needs to grow up in a loving family to spoil him rotten! Take him home soon!

We all need a smile or two...
